The Quytech Story

Quytech is a digital dreamweaver with a vision to transform industries with the right technology. Inspired by the Vietnamese word "Quy," meaning "precious", Quytech's name reflects its commitment to creating valuable and innovative technology.

Back in 2010, when the digital landscape was still uncharted territory for many businesses, Quytech stepped in as a guiding light, offering its technical expertise and domain knowledge to illuminate the path toward technological integration.

Powered by AI, blockchain, and other emerging technologies, the intelligent apps and solutions we develop speak volumes as they consistently meet our client expectations and set the universally defined benchmark of quality, performance, security, and productivity within the industry.

The Dream Team

How we work

Innovate

We constantly innovate to bring you nothing but the best of technology to fulfill your digital dreams and pave the way for your business success.

Collaborate

Honesty and transparency are the heart of how we operate. We develop a shared vision for the project to ensure the final solution aligns with your expectations.

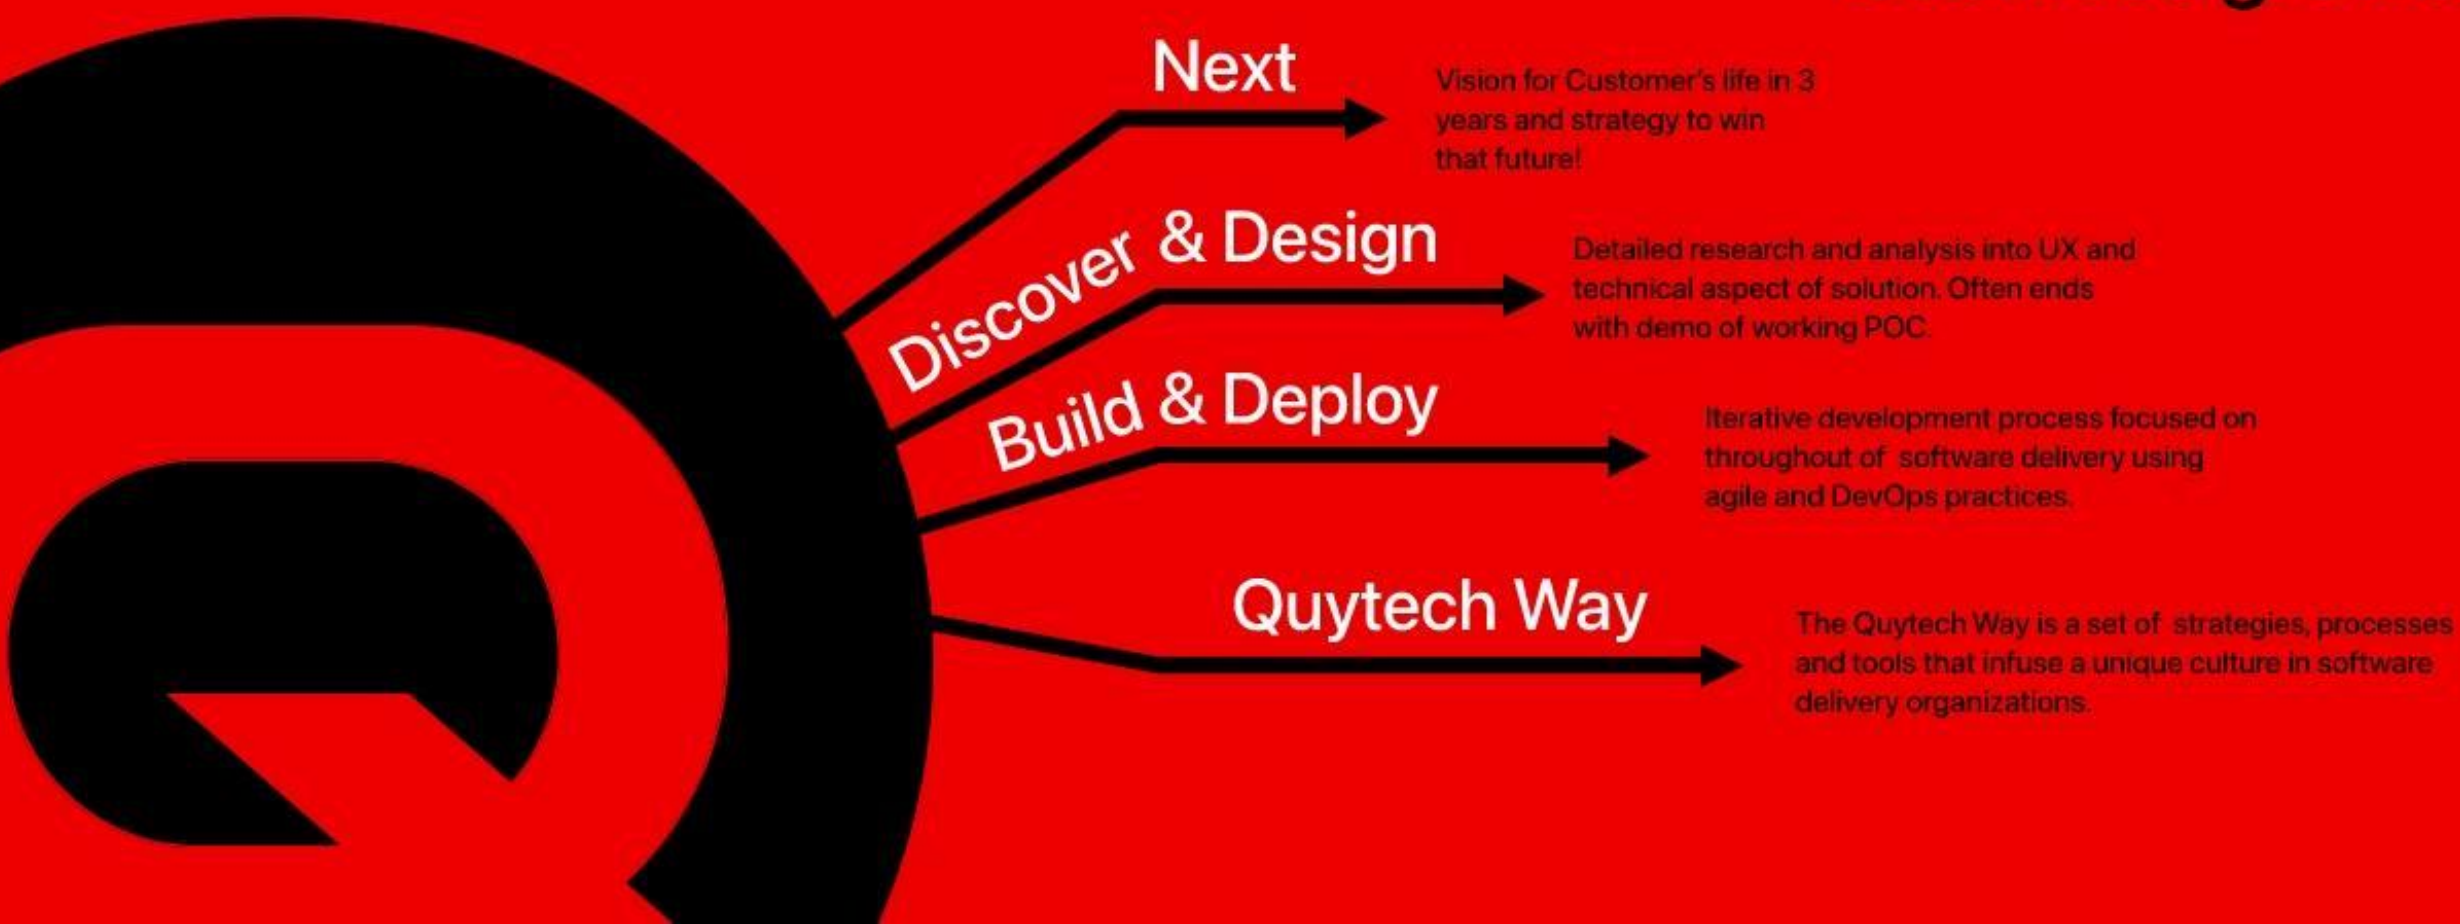

Build

Leveraging data-driven development strategies and agile methodologies, Quyttech crafts custom apps and solutions that enable your business to thrive.

Innovation-Led Torchbearer of Technology

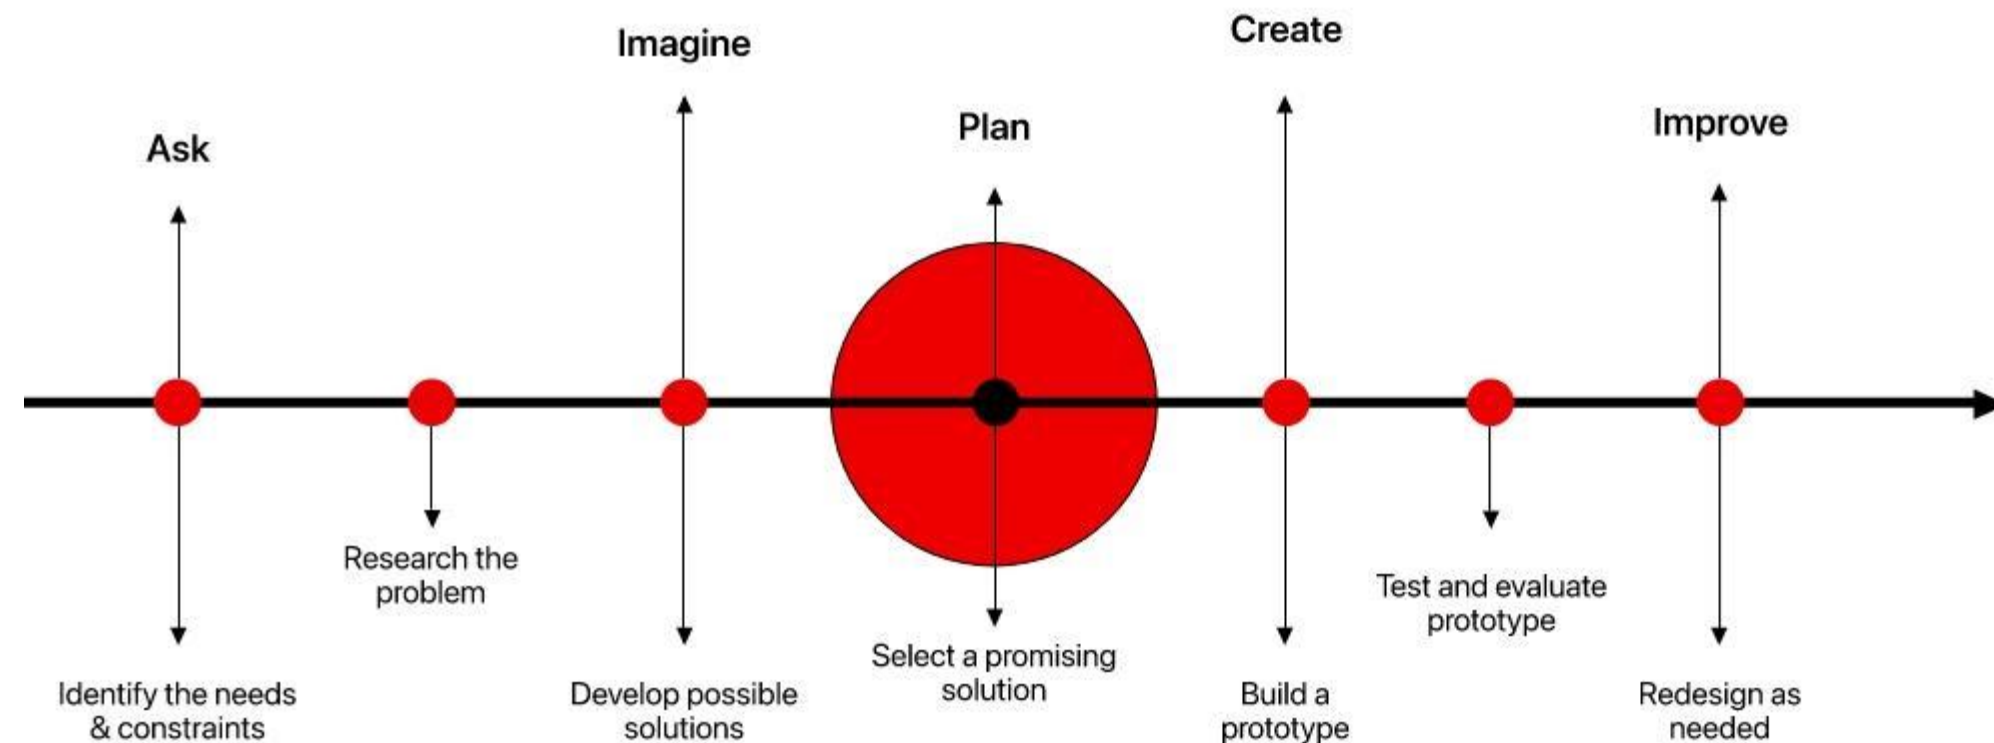

With a forward-thinking approach, we craft disruptive digital solutions to accelerate your business growth

Stage 1

Discover & Design

Define business problem, the potential strategic and tactical solutions, and the roadmap to a successful implementation in a workshop-based environment.

Discover & Design

Establishing a common understanding of the project's problem statement and defining the project KPIs with all stakeholders

Kanban Board

(I1) Core Architecture Set-up

- Infrastructure and DevOps set-up
- Create Data Model
- Build POCs of relatively high risk part of application
- Develop UI architecture - Core CSS and Page Layouts
- Develop Core APIs - CRUD operations

Add a card...

(I2) User Onboarding and Application Access

- User must Signup as Admin on Plannuh
- User must Login to access Budget Dashboard
- User can add Company Details during Onboarding.
- User must establish a budget organization by time
- User must establish a budget amount based on timeframe
- User can organize their marketing team to add detailed budget
- Forgot password

Add a card...

(I3) Management of Goals > Campaign > Program > Expenses

- Company admin and Team member View budget details on dashboard
- User can Add /View/ Edit a Goal
- User can Add /View /Edit Campaign
- User can Add/View /Edit Program
- User can Add /View Edit Expenses
- User can Upload an Expense csv

Add a card...

(I4, I5) Update and Analyze Budget Hierarchy

- User can drag and drop Campaign/Program/Expenses between Goals/Campaigns/Programs
- User can access Full reporting view to see detailed reports on Budget
- Users can view reporting details for Goals/Campaigns/Programs
- Company admin can Share Dashboard with team members
- Admin can view Change logs While editing Goal/Campaign/Program/Expense.
- User can Add a new budget

Add a card...

(I6) Import Expense

- User can specify the expenses on an xls budget hierarchy
- User can upload exp or CSV
- User can map speci the proper fields from into an Expense Vie
- User can download Template for spread optimizes user's exp
- User can manually i and/or Quarter to ex xls or CSV upload
- User can export exp

Add a card...

Stage 3

Quytech Way

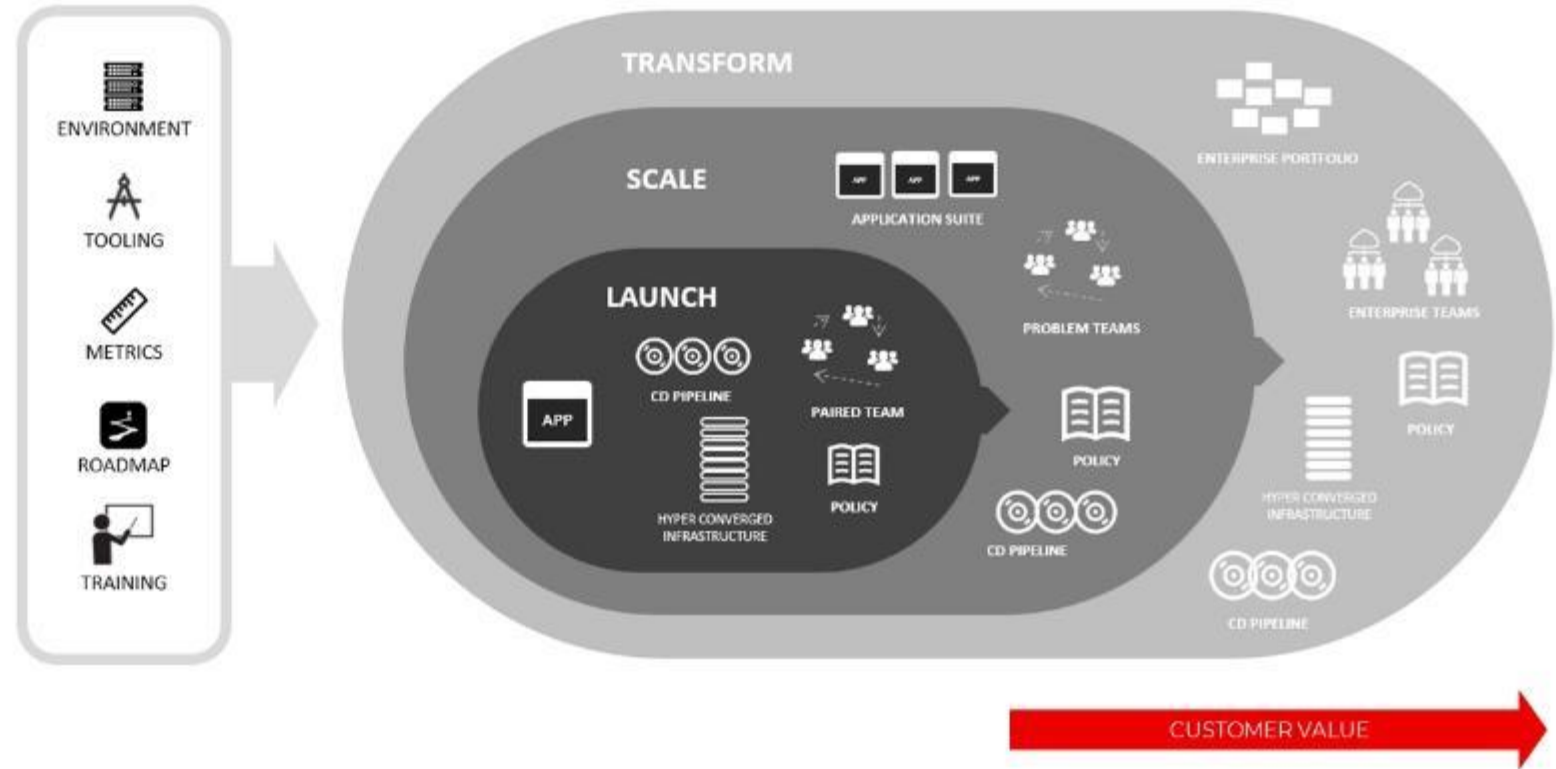

The Quaytech Way is a set of strategies, processes and tools that infuse a unique culture and ensure on time delivery.

Scale across organization

ONCE PROVEN IT GOES ACROSS PRODUCT LINE

**Adaptable, networked,
customer centered end to
end processes, made of
small connected-
empowered teams, highly
automated, small batch
workloads, addicted to
data and speed to value**

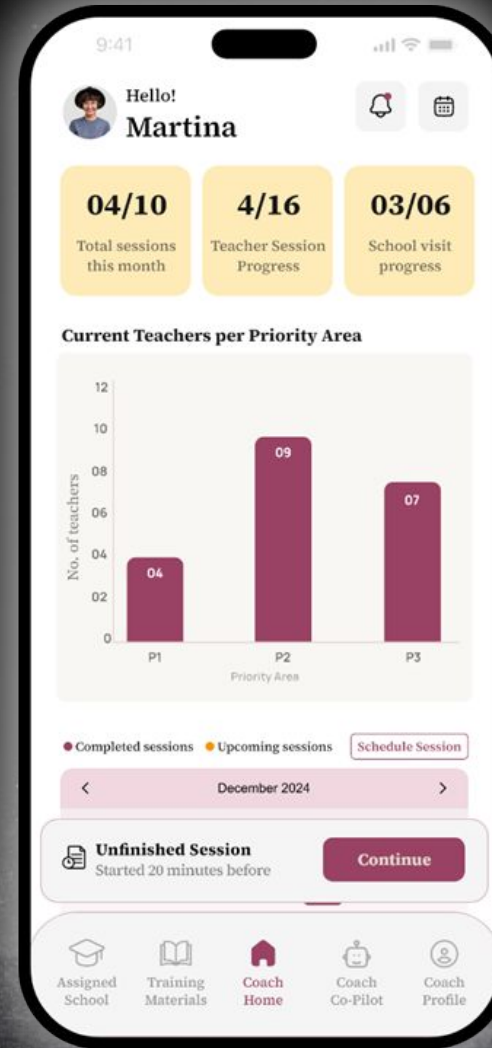

Stage 4

Case Studies

Room to Read - AI-Powered Coaching App

An AI-driven coaching platform designed to support teacher development through video analysis, real-time multilingual chatbot, and performance dashboards. It helps track classroom engagement, offers instant feedback, and enables scalable coaching with personalized insights.

QUYTECH

www.quytech.com

AI-based solution for Detecting Theft

An AI-powered solution built for the logistics and parcel industry to detect theft and ensure package authenticity. Using computer vision and X-ray image recognition, the system identifies objects, flags prohibited items, and verifies them against invoice data in real-time to enhance security and accuracy.

AI-Based Shoplifting & Theft Detection (CCTV)

AI-powered CCTV systems help detect theft in supermarkets by watching live video and spotting unusual behavior. They can alert staff if someone skips the billing counter, doesn't scan an item, stays too long in one area, or tries to hide or steal a product. This makes stores safer and reduces losses.

AI-powered Animal Behavior Detection System

This smart system utilizes cameras to track animals in real-time and understand their actions as sleeping, eating, standing, or interacting with people. It alerts caretakers if the animals show unusual behavior, helping with health monitoring. Also, it tells animals apart from humans or objects, making it useful for farm safety and wildlife research.

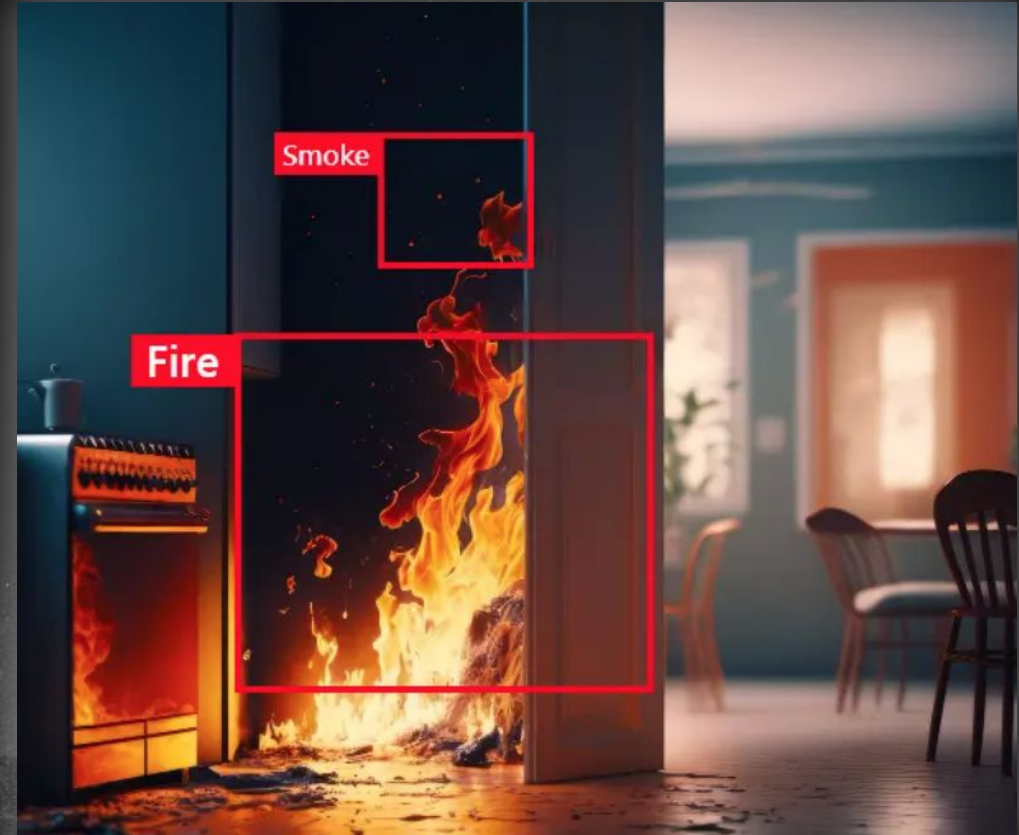

AI-powered Fall Detection System

AI-based CCTV systems can automatically detect when a person falls by analyzing body movement in real time. This helps ensure quick response in case of accidents, especially in places like hospitals, public areas, offices, or homes. The system improves safety by sending instant alerts for timely assistance.

AI-powered Fire Detection System

AI-enabled CCTV systems can detect smoke or fire in real-time across spaces like factories, residential complexes, or theaters. Once detected, they instantly alert staff or emergency teams, helping prevent panic, minimize damage, and ensure people's safety through quick action.

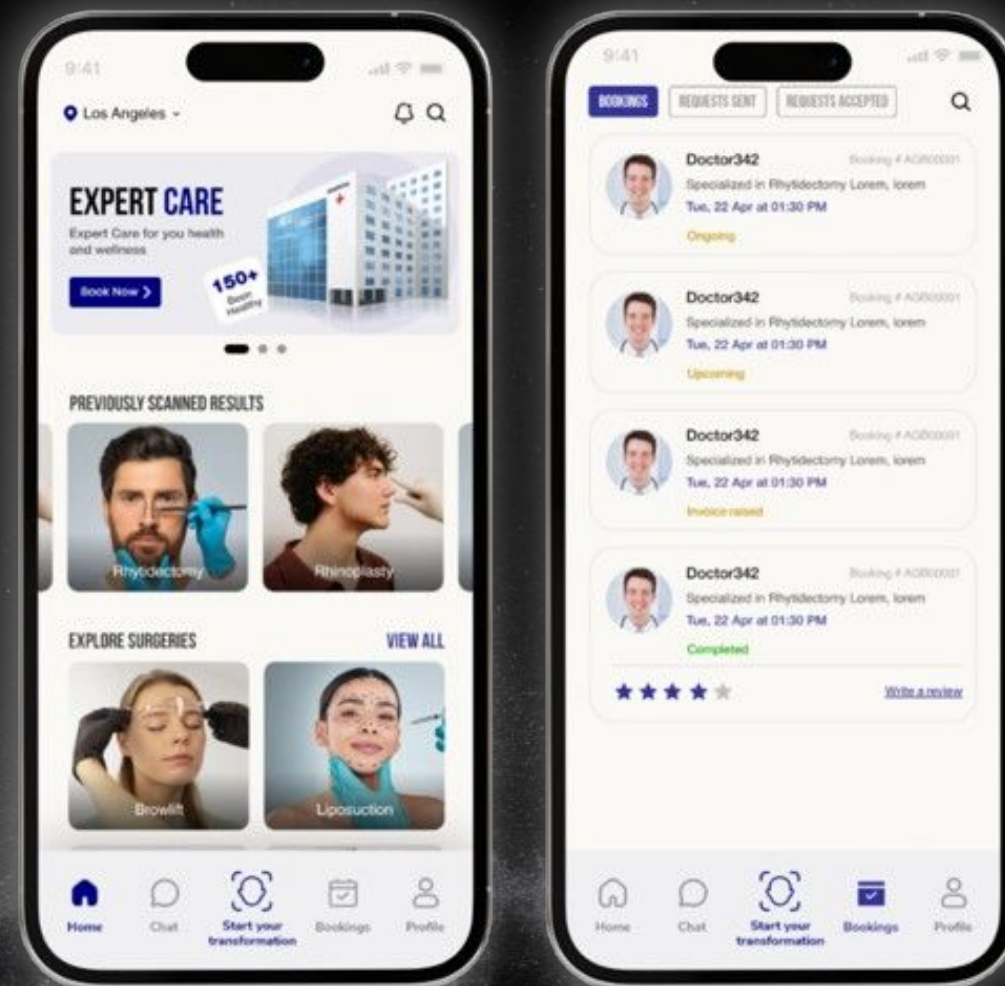

Magic Avatar

Magic Avatar, a revolutionary generative AI-powered image editor designed to transform visuals into anything imaginable. Upload an image, provide a prompt, and witness the transformation. With numerous cutting-edge features, transform ordinary visuals into extraordinary masterpieces with Magic Avatar, the ultimate tool for unparalleled image and video enhancement.

Aesthetic Guru

Aesthetic Guru is an AI-powered cosmetic surgery booking app that scans users' faces and bodies to recommend personalized enhancements. It connects users with qualified surgeons, enabling easy appointment booking. Doctors can manage profiles, schedules, and records. AI ensures tailored suggestions and a seamless experience for both users and professionals.

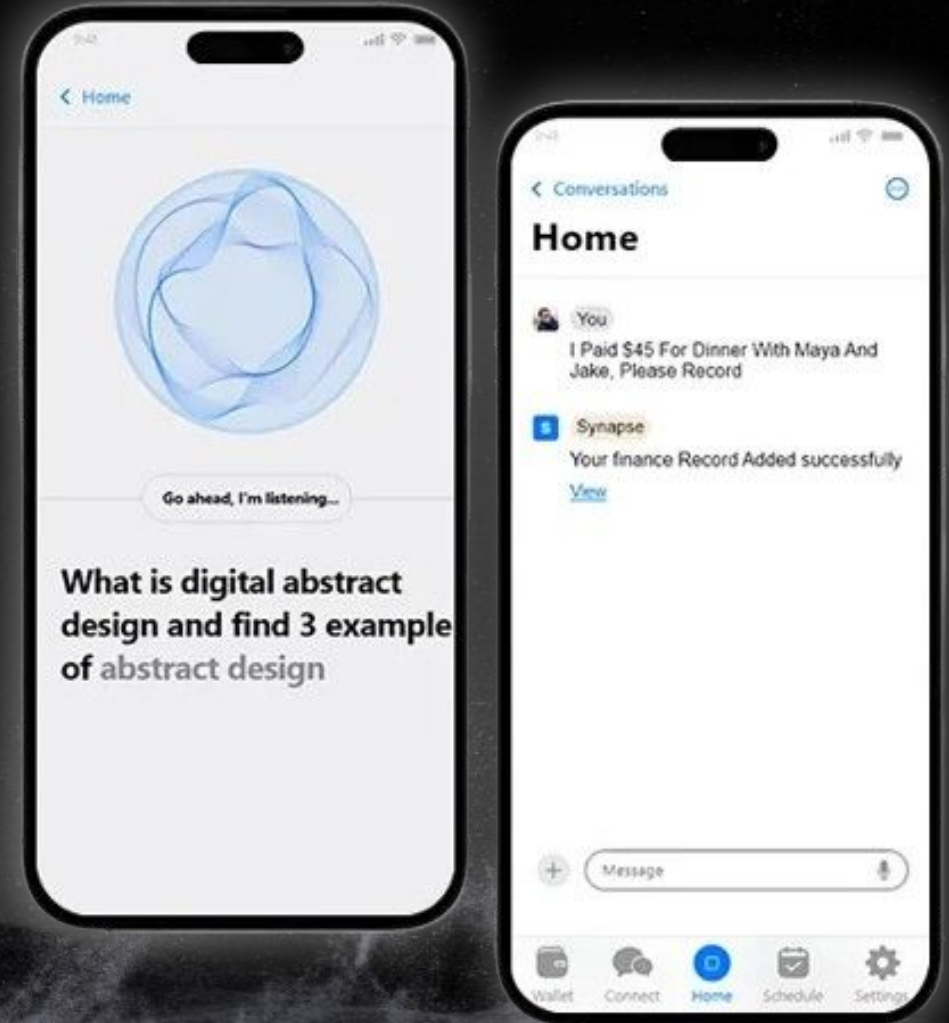

PRAAVI HRMS

PRAAVI HRMS is an ML-based attendance marking and management app designed for SME businesses. The interface is simple to navigate and has cutting-edge features, such as face recognition-based attendance marking, attendance alerts, location tagging, shift management, and more. It is an all-in-one solution built to deliver enhanced and accurate attendance marking and management experience.

Synapse AI

Synapse AI is an AI-powered finance management app that combines expense tracking, ledger access, and analytics with smart communication tools. Users can schedule calls and messages, set alarms and reminders, and use normal or ghost chats. It offers a easy way to stay connected while efficiently managing personal finances.

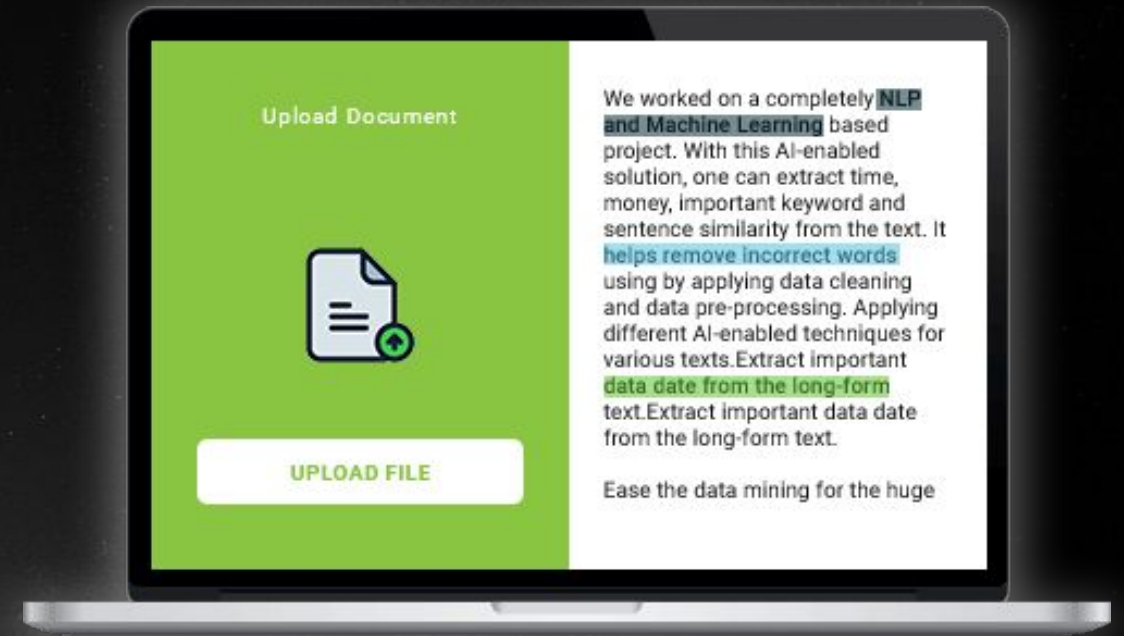

Exxon Mobil – Brand Guideline Analysis

An AI based application developed to validate available elements on sign boards of any brand and verified as per the standard guidelines. This mobile app has the functionality of capturing images of Sign boards through the camera or images can be uploaded through the gallery of device. Selected images will be analyzed for color, fonts, image etc.

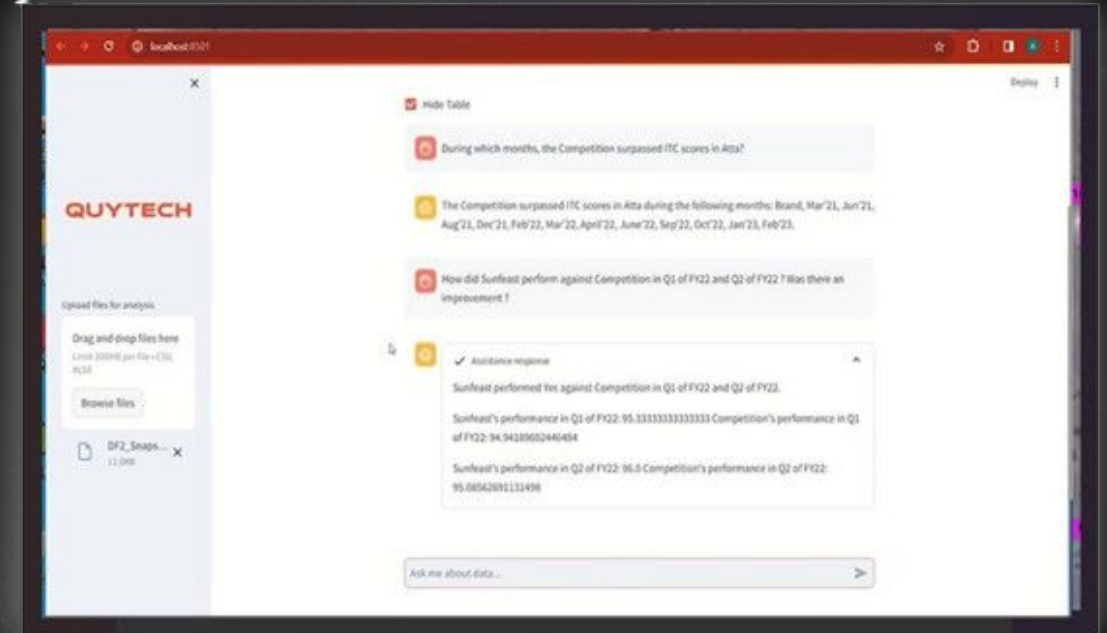

NLP For Legal Text

This NLP and ML project analyzes legal documents to extract time, money, keywords, and sentence similarities. It involves data cleaning with NLTK, vectorizing text using TF-IDF and Word2Vec, keyword extraction via Gensim, normalization, and measuring similarity with cosine similarity, Euclidean distance, and KNN, plus date extraction using a Date_time function.

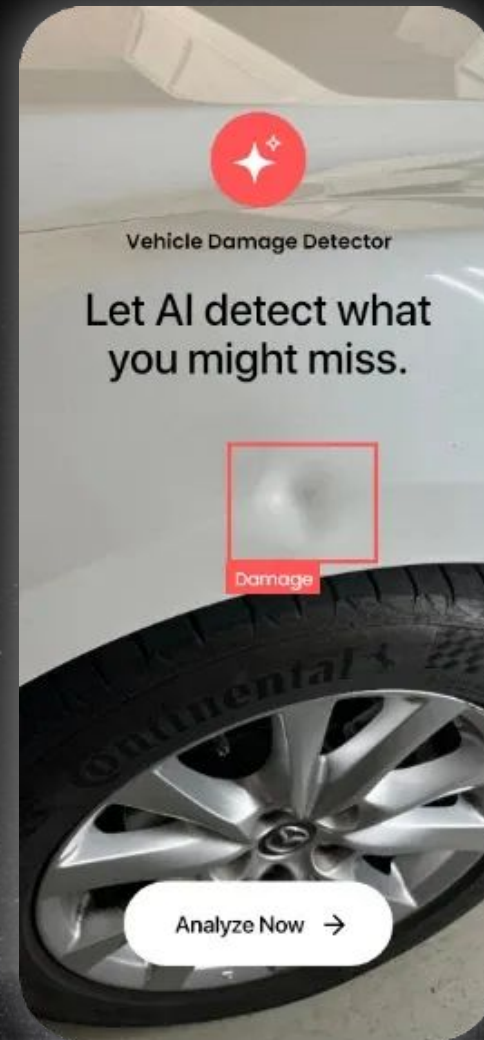

ChatGPT based Chatbot

We have worked on Chatbot Integration project using LangChain, Chroma DB, and Open AI. In this, we can upload a document which can be processed at the backend and then user can ask any questions based on that particular document.

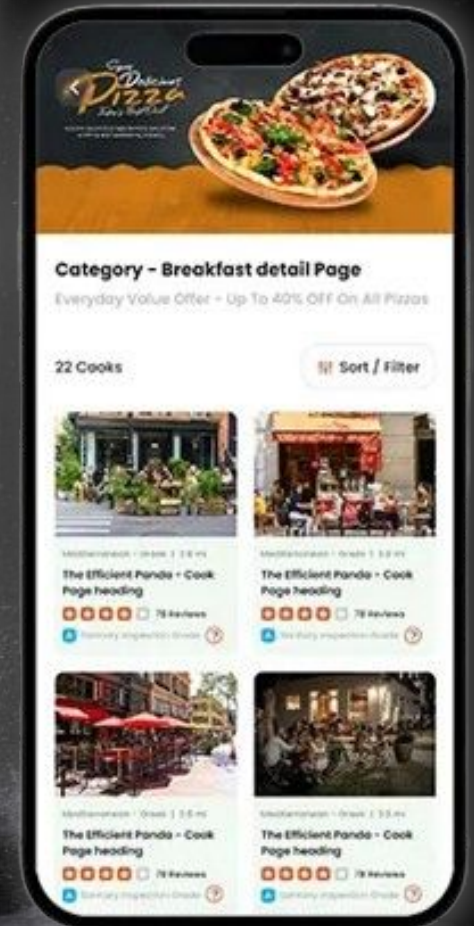

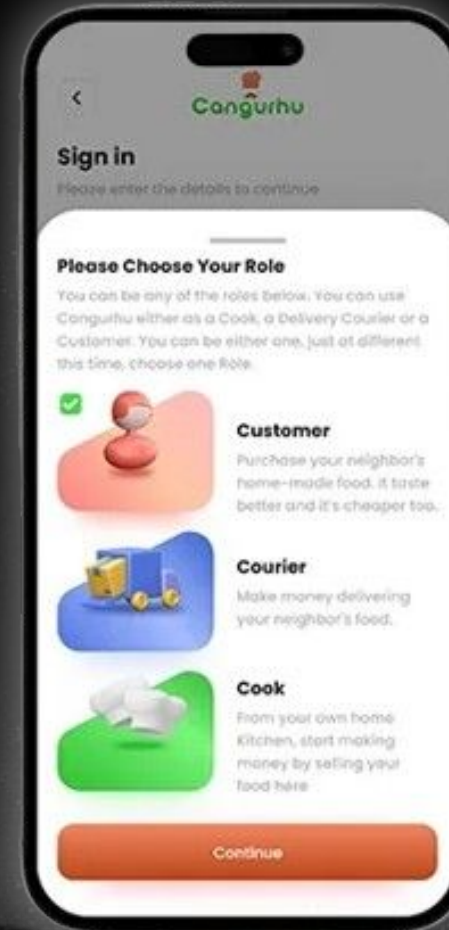

Scandify – AI Car Damage Detection

AI based damage detection Application. The application is designed to leverage the power of artificial intelligence (AI) for detecting and identifying car damages. By utilizing advanced algorithms and machine learning techniques, this application is capable of accurately analyzing images of cars to determine if any damages are present.

Cangurhu

Cangurhu is an innovative food delivery app connecting home chefs with customers craving fresh, home-cooked meals. It uses AI to analyze images and videos for food safety, inspecting kitchens and cooking tools. AI also powers courier facial recognition and enhances customer support, ensuring a safe and seamless experience.

QUYTECH

www.quytech.com

Happy Panda

Happy Panda is an interactive entertainment app powered by Generative AI and the ChatGPT API. Users can chat with a lovable character, Panda, and get real-time weather updates through an integrated Weather API. Just log in with your username and password, tap the mic icon, and start chatting!

Emotional Tracking Project

Emotional Tracking is AI-based emotion tracking solution analyzes users' emotions like happy, sad, and angry while recording video by observing body language, voice tone, and gestures. Using Keras and OpenCV with pre-defined Haar cascades, it detects faces and accurately classifies emotions, helping improve emotion-based analysis and feedback.

AI Object Detection

AI-powered object detection system extracts important data points from various datasets. Using deep learning models like CNN and OpenCV, custom models detect features such as human ethnicity, car types, and logos. The models are trained and optimized for high accuracy, delivering precise results for real-world applications.

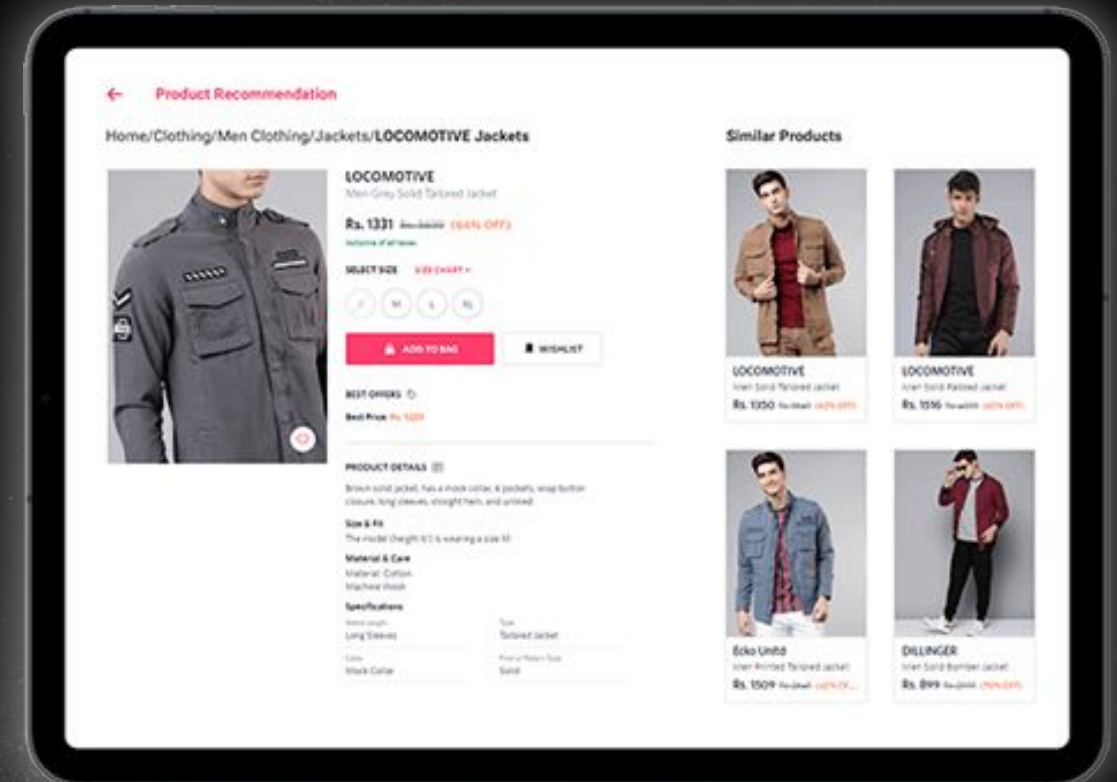

FutureNow

FutureNow is an EdTech platform offering 2-minute short videos on various topics. Futurists can upload videos, create courses, and earn money. AI features include emotion tracking, video transcripts, personalized study plans, recommendation engines, and motion detection to enhance the learning experience.

AI Based Recommendation

This AI-based project provides personalized recommendations by analyzing user history and course ratings. It processes datasets by concatenating multiple fields, then uses TF-IDF vectorization and cosine similarity to analyze and compare words based on n-grams. This approach helps deliver the best recommendations tailored to each user.

Interactive Chatbot

The Interactive Chatbot creates personalized experiences by using AI to resolve customer issues and gather information. Offering 24/7 service, it can engage multiple users simultaneously, outperforming live chat in many industries. Key technologies include Natural Language Processing, deep learning, and it's built on the open-source Rasa framework.

Interactive Voice Based Chatbot

The client is a packaging company making packaging for high end customers. The AR app provides a AI based salesman experience. The user can carry a normal conversation with the bot. The AI bot in this case is also undertaking a marketing survey while engaging the consumer at the same time.
